

# Fact Sheet

---

## Mycophenolate Mofetil

### NMOSD Off-label Drug

---

**Revised 7/13/2021** | This information sheet has been reviewed and approved by members of SRNA's Medical and Scientific Council. Access our NMOSD Therapeutics at a Glance Tool at [srna.ngo/nmosd-ther](https://srna.ngo/nmosd-ther) to compare all NMOSD drugs.

---

---

**How does it work?**

---

Mycophenolate Motefil works by decreasing the number of B and T cells, two type of white blood cells felt to cause inflammation and damage in NMO. Mechanistically this drug is similar to Azathioprine.

---

**When should I not take this drug?**

---

Talk with your doctor about any potential contraindications to Mycophenolate Mofetil.

---

**How do I take it?**

---

Oral pill at home.

---

**How often do I take it?**

---

Twice per day.

---

**What is the typical dosage?**

---

1000 mg two times per day.

---

**How much does it reduce my risk of relapse?**

---

As a clinical trial has not been performed yet on these medications for NMOSD, the estimated relapse risk decrease has not been calculated. Like many other neurologic autoimmune conditions, physicians used this medication before there were FDA approved therapies available as a general immunosuppressant. It is still considered a standard of care and potential option for treatment of NMOSD by most doctors.

---

**What are the side effects?**

---

Diarrhea and abdominal cramps are the most common. Blood cell numbers can be decreased, raising the risk of infections. There is a small risk of blood and skin cancers.

---

**What should I do to prepare?**

---

Your doctor should check your blood work for cell counts and liver enzymes. You should have a skin examination by a dermatologist.

### What ongoing monitoring should occur?

---

You should have a skin examination by a dermatologist yearly. Your doctor should check your blood counts and liver enzymes at least twice per year.

### Who makes this medication?

---

Cellcept is produced by Genentech (a member of Roche). Myfortic is produced by Novartis.

### How can I get help paying for it?

---

You can work with your doctor or local hospital's social work department to try to get assistance covering these medications.

### Can I take it if I'm pregnant?

---

No. Mycophenolate Modafinil is pregnancy category D, meaning this medication is not safe for use during pregnancy. It is associated with increased risks of pregnancy loss and congenital malformations.

### Clinical Trial Information

---

There is no clinical trial investigating Mycophenolate Modafinil for the treatment of NMOSD.

### Will my insurance cover it?

---

This will depend on your insurance company and the billing code your doctor uses. For specific questions, call the customer service phone number on the back of your insurance card with the name of the drug in question, as well as ICD (diagnostic) code your doctor uses.

### Is it FDA approved for NMOSD?

---

No, it is used off-label.
