## Have you or a loved one been diagnosed with Transverse Myelitis?

Announcing a multi-center, innovative, patient-focused, observational research study on Pediatric Transverse Myelitis in North America called **CAPTURE**: Collaborative Assessment of Pediatric Transverse Myelitis; Understand, Reveal, Educate.

If you, your child, or someone in your family has been recently diagnosed with the rare neuro-immune disease called transverse myelitis, we want to hear from you.

Your participation will help families and healthcare professionals:

- Understand the current status of care in children diagnosed with TM;
- Reveal the best practices and treatment options available; and
- **Educate** physicians, clinics, the health care system, and families and individuals about the most important and achievable outcomes following a TM diagnosis.

## To be Eligible Research Volunteers must be:

- · Diagnosed with Transverse Myelitis
- Between the ages of 0-18 (or 17 years at onset)
- Within 90 days of onset of symptoms

Virtual participation in this observational study involves a review of treatment records and imaging by Dr. Benjamin Greenberg of University of Texas Southwestern. Records and imaging are sent by mail and participants complete an online survey about how the child is recovering from Transverse Myelitis at 3, 6, and 12 months after symptom onset. Travel is not necessary for virtual participation.

## For more information, please call 855-380-3330 extension 5 or email rwhitney@myelitis.org
